Election/Restrictions

This application contains claims directed to the following patentably distinct species: Treatment with IFN- τ to lower elevated IFN- γ because of:

1. An autoimmune disease (claims 4-6);
2. Administration of IFN- α or IFN- β (claims 7-10) wherein the treatment population is:
 - a. Not further specified and treated with either named IFNs (claim 7),
 - b. MS and treated with IFN- β (claim 8),
 - c. virally infected and treated with IFN- α (claim 9), or
 - d. suffering from a cellular proliferative condition and treated with an antiproliferative agent or IFN- α (claim 10); or
3. an unspecified disease condition.

The species are independent or distinct because the source of IFN- γ increase has a unique aetiology.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1,4,6,7,9-11 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 1648

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.
